

KPI Monitoring

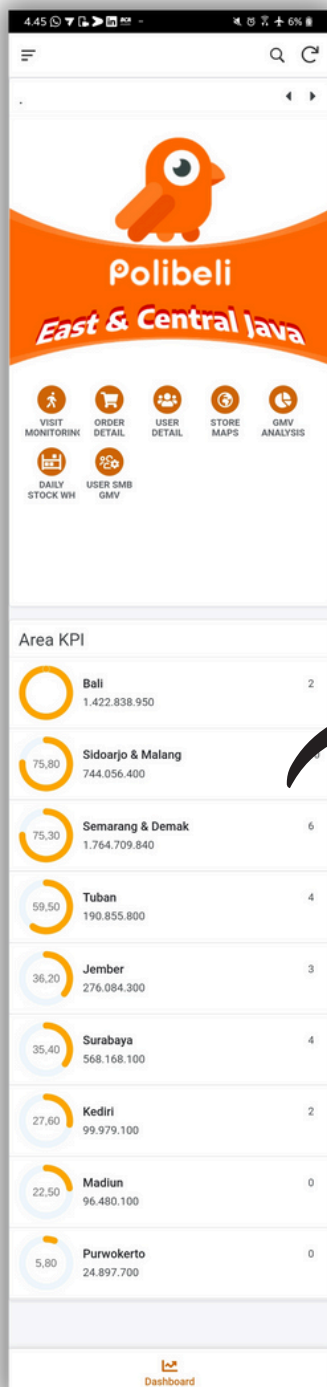

Built using :  AppSheet

By Samsul Arifin as Regional Sales Manager Asistant 2024

This AppSheet application is designed for all activities and needs of sales under the East Java Region, which oversees several cities. Through this application, users can directly track the achievements of each area or even the performance of individual sales representatives on a day-to-day basis. Users can also monitor sales visits to stores and gain insights into the products purchased by stores or the reasons why stores did not make purchases.

Additionally, the app features store mapping integrated with Google Maps, making it easier for users to conduct visits. A simple GMV (Gross Merchandise Value) analysis is also included in the form of a pie chart to compare sales performance across different products in each area.

Home Page

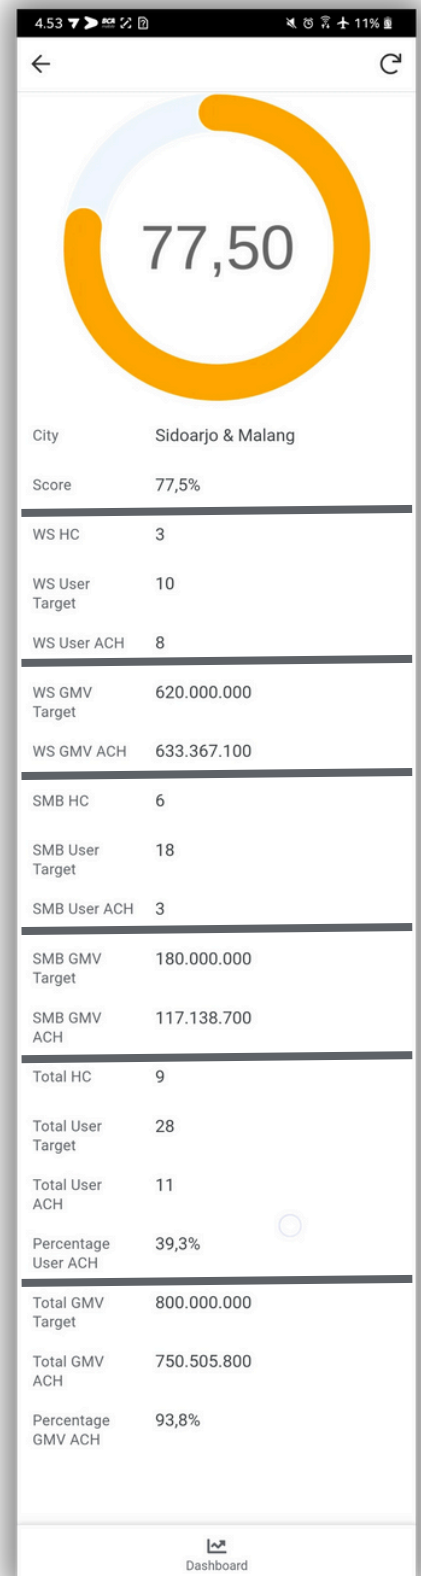

On the home page, you will find a collection of menus and the visibility of KPI percentage achievements for each city under the East Java regional management.

These are the menu options available

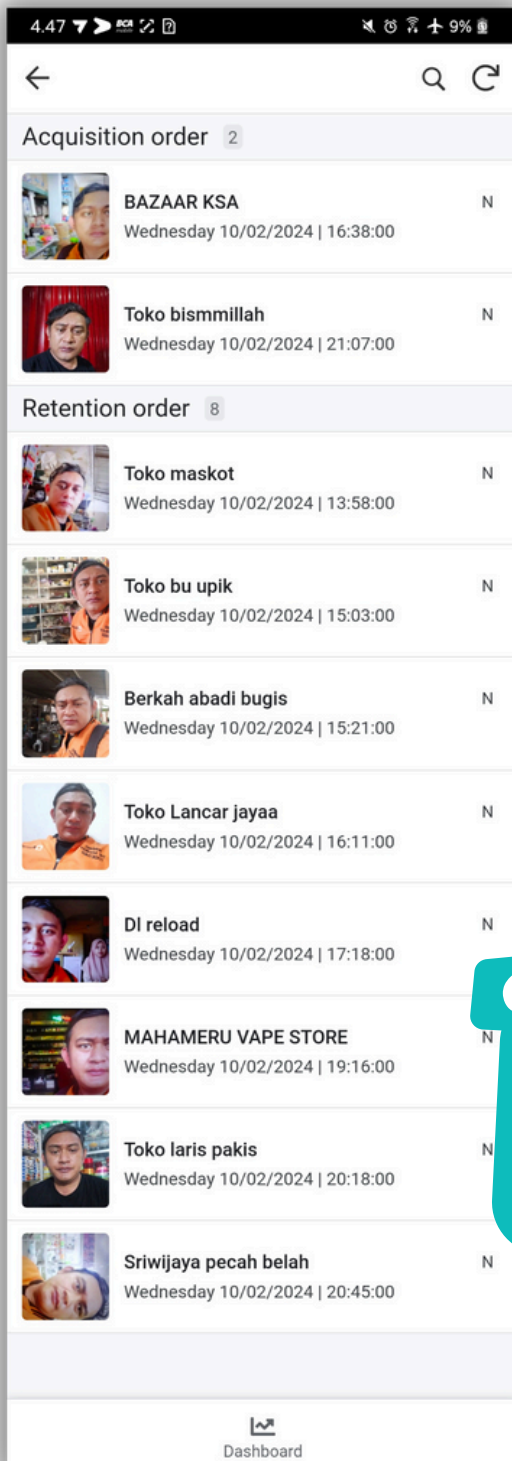

KPI Dashboard

Click for Detail KPI

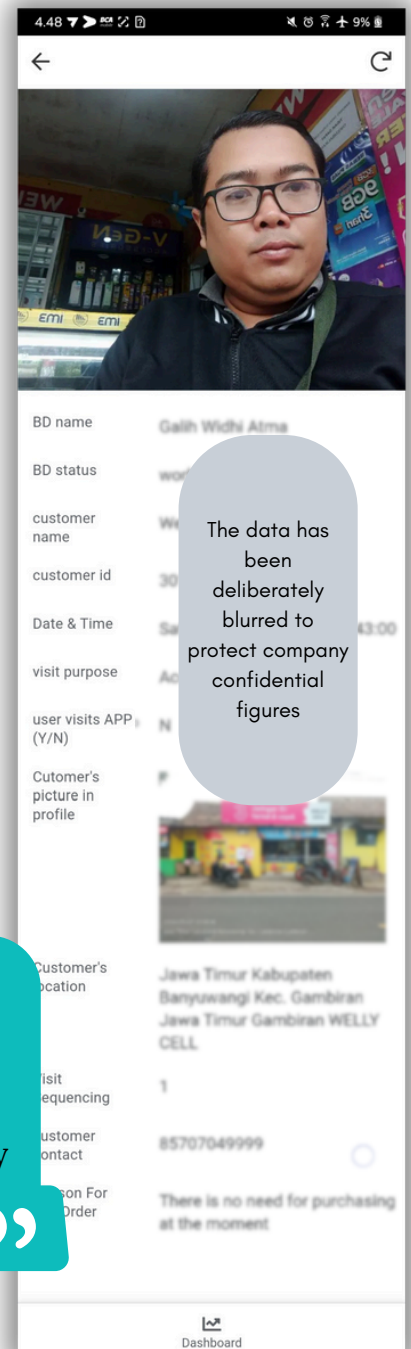

Sales Monitoring

In this menu, users can monitor the visit activities performed by each salesperson at different hours. This allows users to evaluate the effectiveness of each salesperson at any given time. The menu also displays the store status: "Y" indicates that the store placed an order during the visit, while "N" indicates that the store did not place an order during the visit

Click for Detail KPI

“**impact**”

This menu provides visibility into salesperson activities and has successfully reduced the occurrence of fraud committed by salespersons.

“impact”
This menu serves as a reference for leaders to give extra attention to underperforming salespeople.

Store Map

This menu provides the location points of partner stores, integrated with Google Maps. It also includes a filter feature to identify the coverage area of each salesperson. On the displayed menu, there are map points in red, yellow, and green:

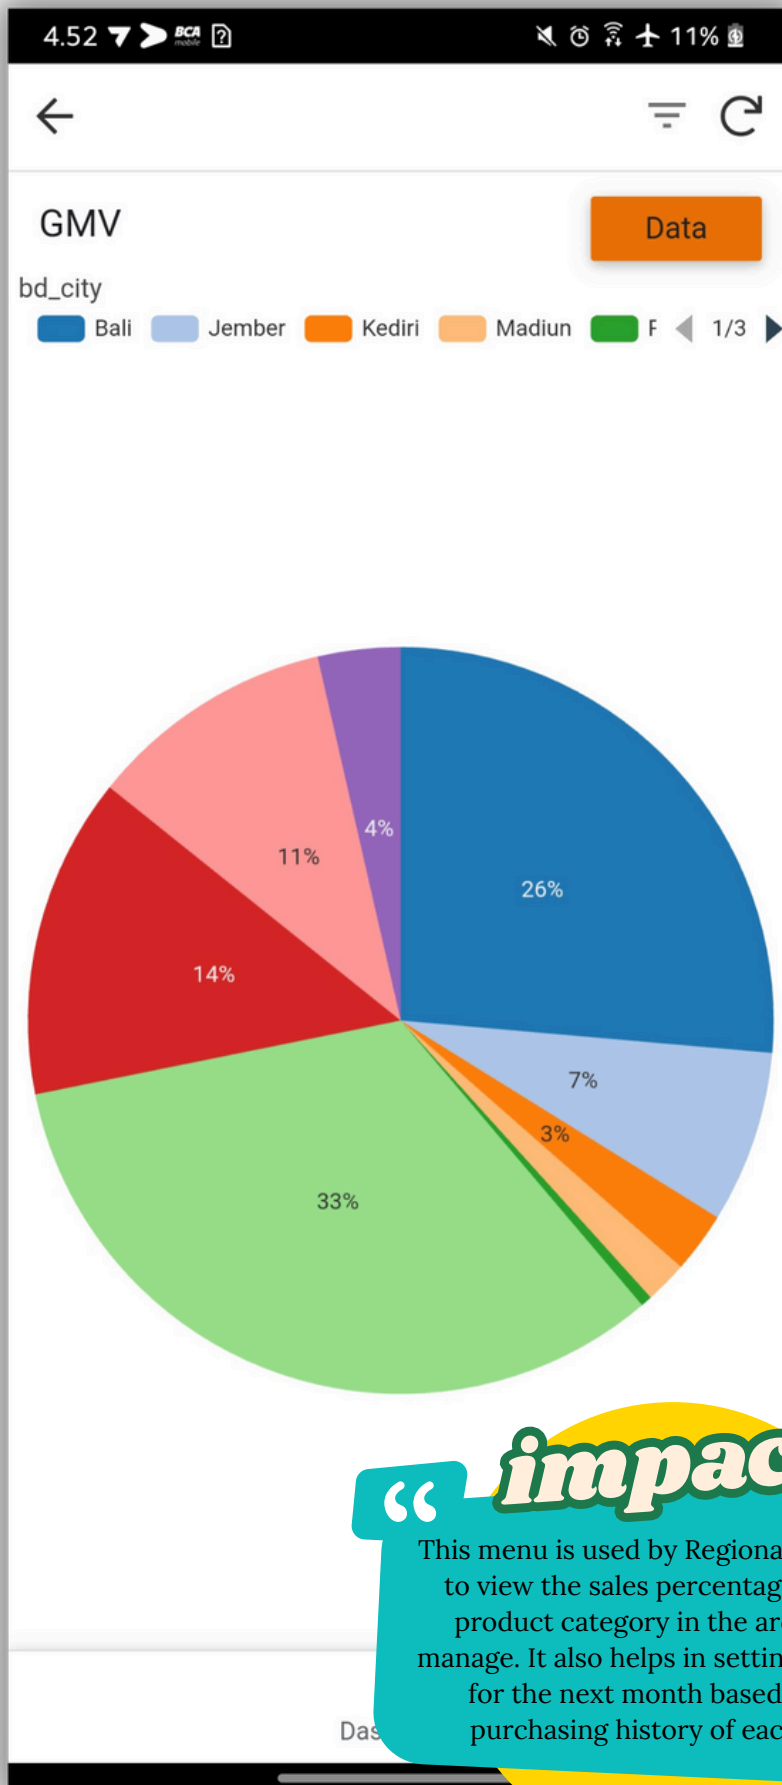

- Red: The store has not yet been acquired as a partner.
- Yellow: The store made a purchase in the previous month but has not made any purchases this month.
- Green: The partner store has made purchases this month.

“impact”

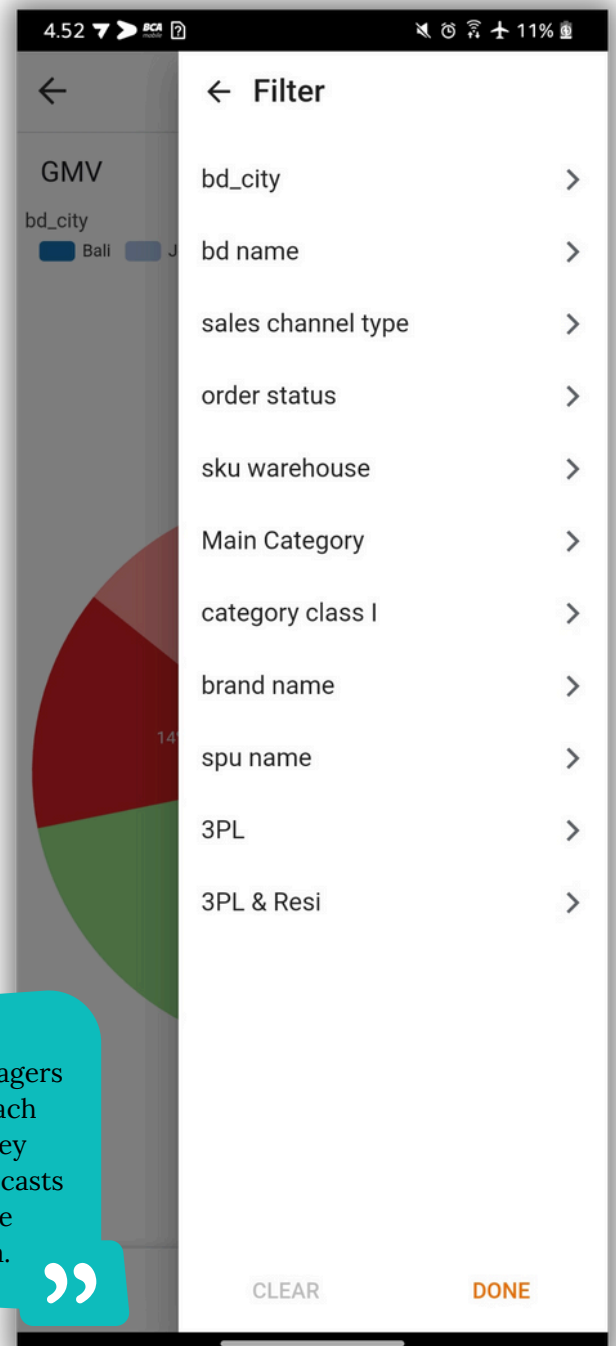

This menu helps leaders stay aware of product distribution and partners who have not made transactions this month.

”

Chart Achievement

This menu provides a simple analysis used to compare sales across product categories and areas based on the selected filters. It helps facilitate market penetration by identifying hot products from other areas

“**impact**”

This menu is used by Regional Managers to view the sales percentage of each product category in the areas they manage. It also helps in setting forecasts for the next month based on the purchasing history of each area.
