Custom AppSheet solution built for the Gain Yum project by Polibeli Indonesia to manage field operations and consignment sales of imported snack products in Indonesia. Supports KA, Horeca, and GT channels with features for store registration, product tracking, visit reporting, and real-time sales monitoring. Developed by Samsul Arifin to enhance operational efficiency and data visibility in a consignment-based distribution model.

The dashboard is built using SVG to enable real-time visualization of performance achievements.

Used by 70+ users across sales roles—Channel PICs, Regional Managers, Area Managers, and BDs—this app, deployed by Samsul Arifin for Polibeli Indonesia, enables real-time performance monitoring to meet targets on schedule and supports customer feedback collection for service and product R&D improvement.

Multi-level role System

This application incorporates a multi-level role system, where each role is assigned specific permissions tailored to their responsibilities. For instance, Area Managers can monitor all achievements and on-ground activities of BDs (field sales), including store visits, stock updates, and sales performance. Likewise, Regional Managers have visibility over the performance and operations of each Area Manager under their supervision. In addition to visibility, higher-level roles are also granted permissions to edit or delete records submitted by their subordinates, enabling better control, data accuracy, and accountability across the field operations.

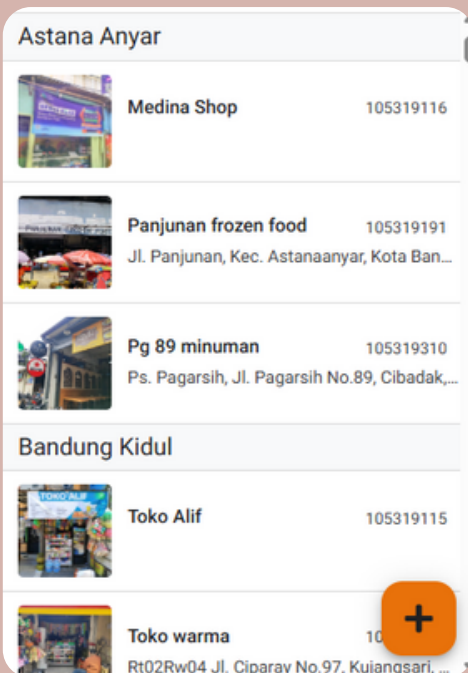

OVERVIEW

NOTE : All numbers and achievements are not actual figures and have been modified for confidentiality purposes. They are intended for illustrative use only, with some data blurred.

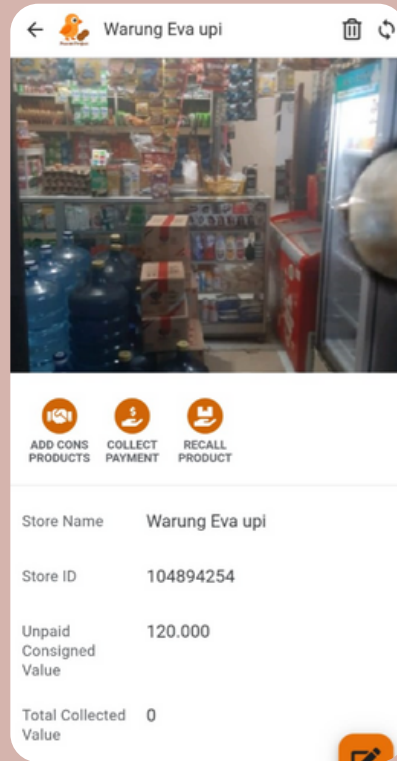

Tracks visit-related sales activities, complete with timestamp and GPS coordinates (latitude and longitude)

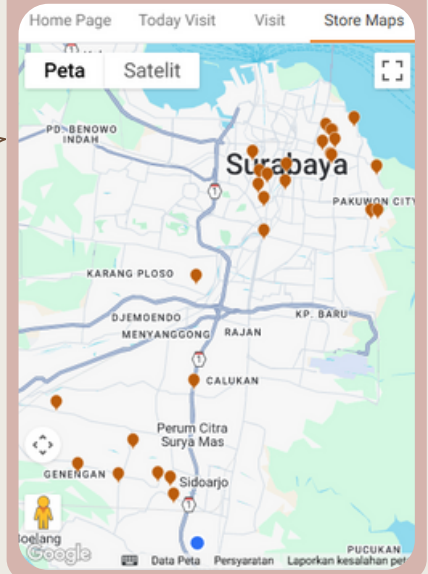

Displays a list of customers registered as partners, grouped by sub-district to optimize visit scheduling and time efficiency.

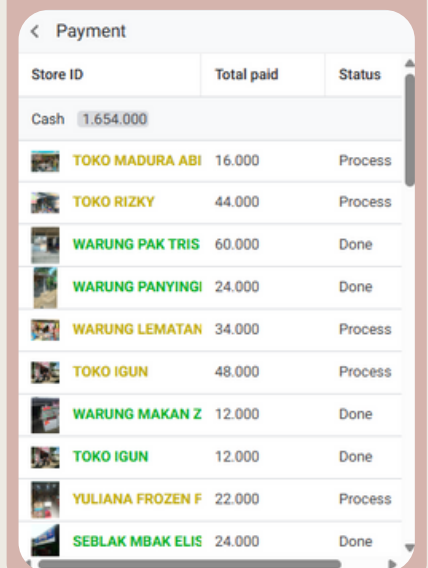

Displays detailed customer information, including basic store data, owner details, and visit history, as well as records of consignment activity, payment collection, and product recalls.

Displays store distribution by area, integrated with Google Maps for location visualization.

Finance can track unpaid stores (yellow) and paid stores (green).

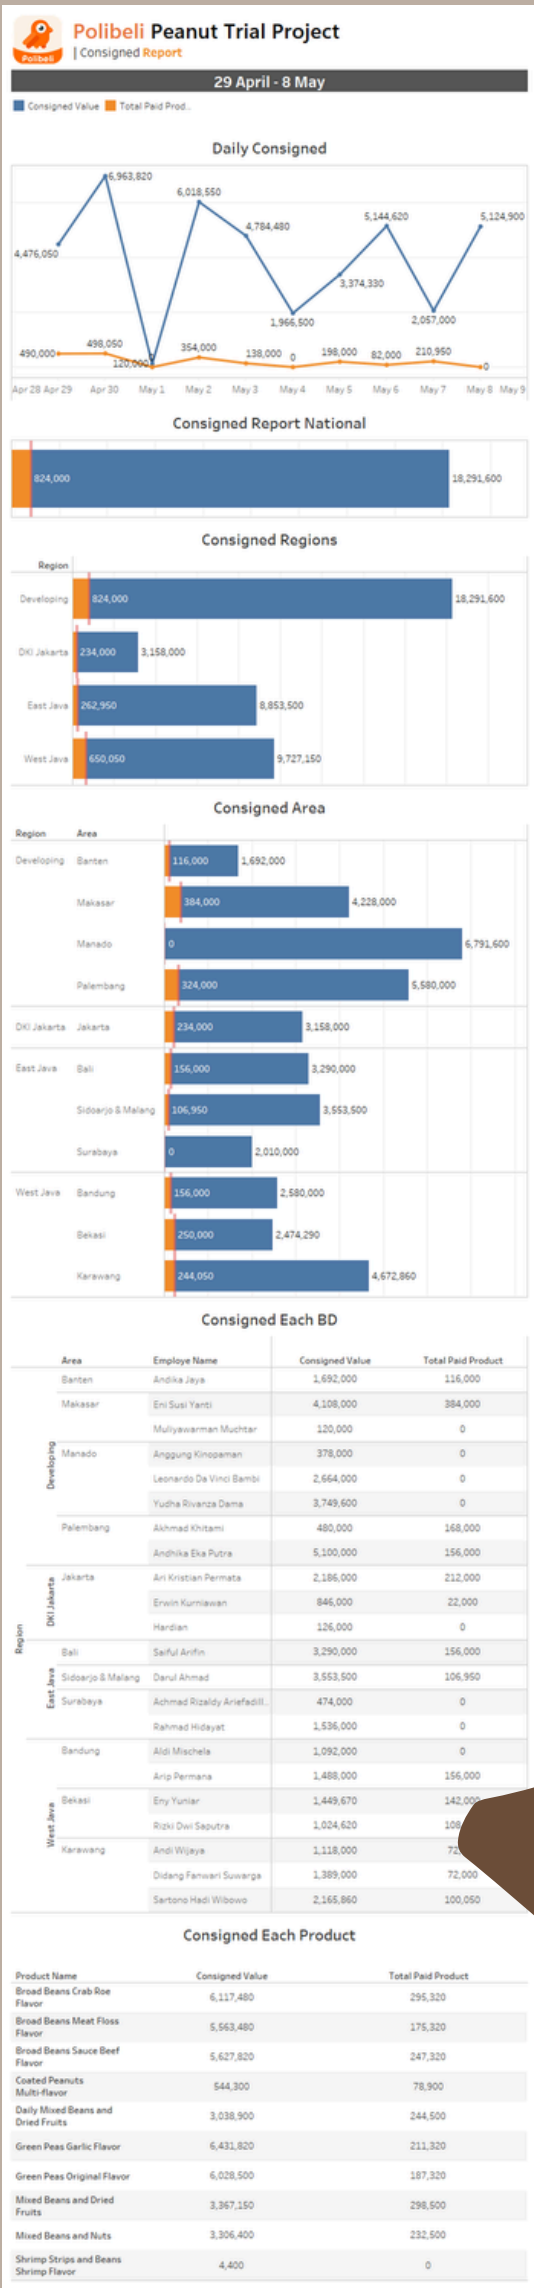

Top Menu Overview

The Top Menu offers quick, role-based access to key features, including:

- Dashboard: Real-time performance tracking with SVG visuals
- Customer: Add and manage stores by channel
- Transfer Product: Log daily stock withdrawals by BDs
- Visit Report: Record store visits, stock checks, and payments
- Consignment: Track consignment sales and payments
- Recall Product: Manage product returns (damaged/expired/rejected)
- Feedback: Submit customer insights for service and product R&D

Access is tailored to each role to ensure relevant and efficient workflows.

DAILY REPORT
Output from AppSheet

Note: All figures mentioned are for illustrative purposes only to protect company confidentiality.

All daily report data originates from AppSheet and is then visualized through charts and graphs using Tableau. Additional notes and context are provided to support reporting to top management, helping them make informed decisions more easily.

Report from appsheet

```
=QUERY(IMPORTRANGE("https://docs.google.com/spreadsheets/d/1xj1neEKCvgkbsMcXoxJ3PUSjUXrmosz6yBWLLPeCkJE/edit?gid=1891457768#gid=1891457768","General Feedback from store!A:K"),"select Col3,Col10,Col9,Col7,Col8,Col2,Col11,Col5 where Col5 is not null order by Col3 DESC")
```

Adjustment between AppSheet output and Tableau input (required columns) is handled using queries within the spreadsheet.

This project integrates AppSheet as the data entry tool, Google Sheets for data processing, and Tableau for data visualization.
